Subject: Title V Permit Corrections

Hi Julian:

We request that the following correction be made to the Draft Title V permit:

The reference to oxidizing catalyst should be removed from PC 12122 Parts 3, 4, & 5 and PC 18629 IX.B.3 should be deleted in its entirety. The Engineering Evaluation done for Plant 16, Application 18281 in 1998 discusses the fact that the catalyst vendor mistakenly concluded that Tosco (owner of record at time) would be able to comply with CO emission limits after modification of the turbine/duct burner SCR catalyst system. CO emission increases without BACT or offset requirements were allowed under the NOx retrofit project to comply with BAAQMD Regulation 9-9.

Thank you.
